# MAKRO PEEL

face and body  
biorevitalizing peeling

*" the ultimate peeling  
for divine skin "*

Mesorga is proud to announce **MAKROPEEL®**, the innovative peeling which, with all of its peculiarities can be actually considered as chemical biorevitalizing serum, in fact all of its components are perfectly amalgamated in a particular synergy that increases its effects both like exfoliating and like cutaneous oxygenation and rejuvenation.

**MAKROPEEL®** can be considered as a medical device that, at the same time exfoliates, biorivitalise and has a lifting effect.

At the same time:

*exfoliant*

*biorevitalizing*

*lifting effect*

*the face and body chemical  
biorevitalizing serum*

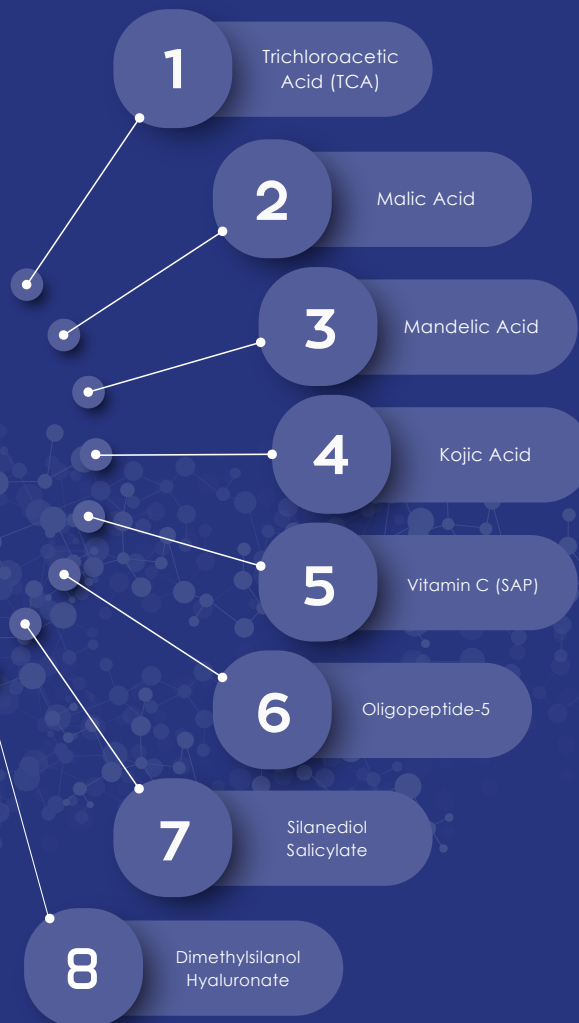

MESORGA

## key ingredients

The main exfoliating action is due to **Trichloroacetic Acid (TCA)** which, unlike other more invasive peelings, works on deeper skin layers, without causing external irritation.

It gives us a real restructuring action that, in synergistic combination with other elements, lets **MAKROPEEL®** be considered an actual hydro-booster, becoming a valid choice instead of needles and also an evolution of treatments that can be done with current medical devices, just like fractional laser.

The **Malic Acid** belonging to the category of alpha hydroxics, is one of the main organic acids contained in the fruit, has exfoliating and antioxidant effects, promoting the process of elimination of the epidermis' dead cells and stimulating the replacement of new cells; moreover the malic acid stimulates the collagen production helping the skin hydration, besides having the capacity of increasing water retention in the stratum corneum, thus rehydrating the epidermis. The exfoliating properties of malic acid allow the decreasing of skin spots, besides having important anti-inflammatory effects.

The **Mandelic Acid** is derived from a particular bitter almond extract, has an exfoliating effect similar to the glycolic acid and pyruvic acid one, but but unlike these it is much more effective because it has no photosensitizing effects, so it's suitable the whole year; that particular acid has important lightening and anti-acne properties, thanks to bacteriostatic and sebostatic benefits.

The **Kojic Acid**, derived from different type of mushrooms, just like japanese koji mushrooms, is obtained by malted rice fermentation, used in the production of saké (Japanese rice wine), is mainly used for its antibacterial, antifungal and blocking properties of melanogenesis; in fact it's used in the food sector on cut fruit to prevent the oxidative browning and on seafood to preserve pink and red colors, while it's used in cosmetic sector to brighten up the skin and treat diseases like the face melasma.

**Oligo Peptide-5** is a polypeptide of the latest generation containing actually 73 amino acids, scientifically synthesized for stimulation and repair of skin tissue, in this case mainly for KGF, also known as keratinocyte growth factor; in fact this oligomer is the most efficient fibronectin precursor that, just like it, really helps in increasing skin compactness and elasticity.

The **water soluble** form of **Vitamin C** (sodium ascorbyl phosphate) contained in **MAKROPEEL®**, protects the skin thanks to its antioxidant properties, in addition to the ability of lightening the skin spots, and being an efficient buffer for some solution elements, such as mandelic acid.

**Silanediol Salicylate**, resulting from the combination of salicylic acid and silanol, exfoliates and has a tightening/anti-aging effect.

Finally, **Dimethylsilanol Hyaluronate**, a derivative of hyaluronic acid combined with dimethylsilanol, has a moisturizing and firming action, supporting the skin barrier during exfoliation.

It contains  
**5 vials of 7ml € 0,236 oz.**

## APPLICATION

## Makropeel chemical biorevitalizing serum Protocol

1°

STEP

Carefully cleanse the skin with **Mesorga pre-peel solution** avoiding contact with the eyes and mouth, removing it with water and drying with tissue paper. Make sure you have previously removed any traces of make-up with a water-based cleanser or simply alcohol-free make-up remover wipes.

2°

STEP

Proceed with the application with **MAKROPEEL®** wearing protective gloves or using a small brush, by dosing 2 ml of product to the face (leaving out the areas where the skin is most sensitive, such as the eye contour, nose wings and labial commissures) in a homogeneous way by performing light massage maneuvers for a few seconds, ensuring better absorption of the the active ingredients.

3°

STEP

The application time will vary depending on skin sensitivity, **from 1 to 5 minutes**. In case the treatment involves face, neck and décolleté the dosage will be doubled. The application can be repeated if the skin shows no irritation, following the same procedure, using a minimal amount of product and observing the same application time.

4°

STEP

Do not rinse with water. Do not neutralize. Finish the treatment by applying a thick layer of **Mesorga post-peeling cream**. Leave on for 5 minutes and then massage until completely absorbed.

## HOME THERAPY

5°

STEP

After peeling, it is essential to use **Mesorga Repair Cream** daily at home, applying it at least 4 times a day. The formula, carefully designed for all skin types and imperfections, restores vitality, hydration, and elasticity thanks to the synergy of its active ingredients. In case of sun exposure, the use of a sunscreen with **SPF 50** is recommended.

Results after treatment clearly visible

BEFORE

MAKRO  
PEEL

AFTER

The recommended interval between sessions is 20/25 days
